

Mercer - Balance Sheet & Cost Projection Calculator

To setup an environment that would allow business analysts, consultants, user experience designers, UI designers and developers to centralize on product designs and have a centralized code based that match what was in the design system.

My Role

UI Developer/PM

Project Team

1 Visual Designer, 1 UX Designer and 3 UI Developers

Duration

5 Months

Project Status

Went live into production

Design Methodologies

This was a quick project that was to redesign the product for a conference. Started with an inventory of components and pages that needed to be redesigned. Then the designer worked from the supplied inventory. Developed a kitchen sink page of elements and components based on the designs. These were building blocks to build pages used by other developers.

Business Goals

To redesign the user interface and work flows for the end user to compete with other products on the market. The redesign effort was to bring a more modern design look and feel to the product.

Actual Results

Product redesign was well received and stirred up more interest to redesign other calculator product lines.
